

Isn't it about `(?<!.*?)\W[^\]]`
time someone invented
**READABLE
REGEXES?**

WE

HAVE!

Raku reasserts Perl's dominance in the world of text processing and leads with a simpler, more readable, and more powerful regex syntax:

PCRE: `/(?<!foo)bar(?=baz)/`

Raku: `/<!after foo> bar <before baz>/`

And we didn't stop there. We also made regexes composable!
Core language includes extensible grammars. So powerful, even the Raku compiler uses them to parse Raku code!
